

Student Performance Data Analysis using Pandas and Matplotlib

Objective:

To analyze student performance data and generate visual insights.

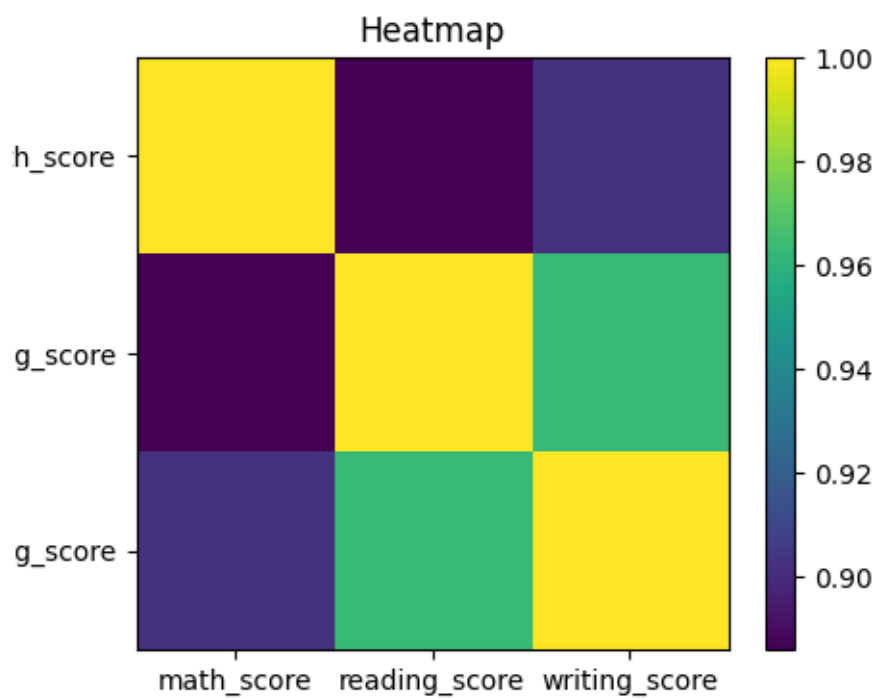

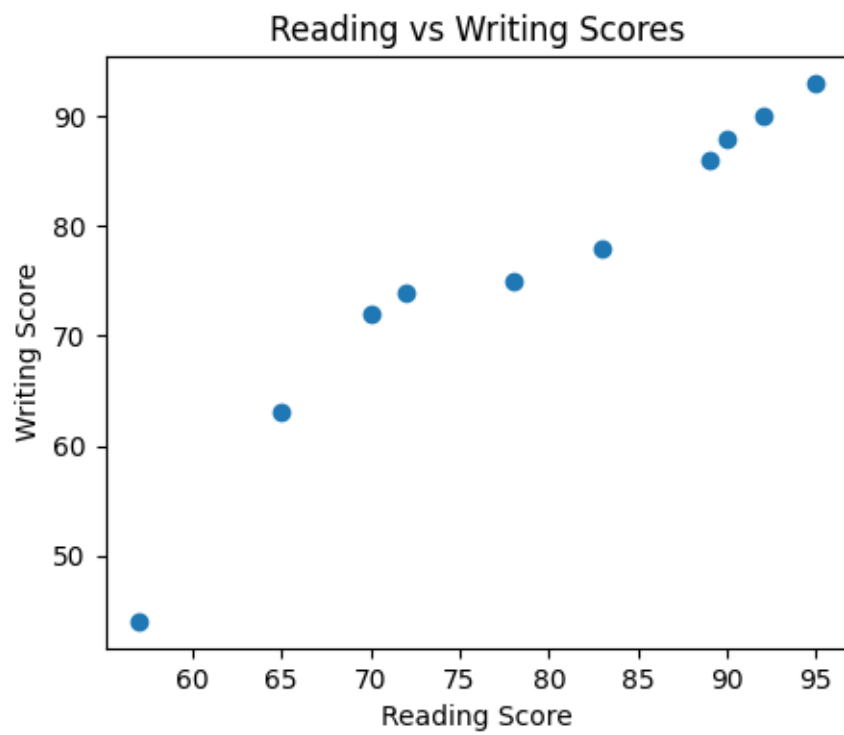

Tools Used:

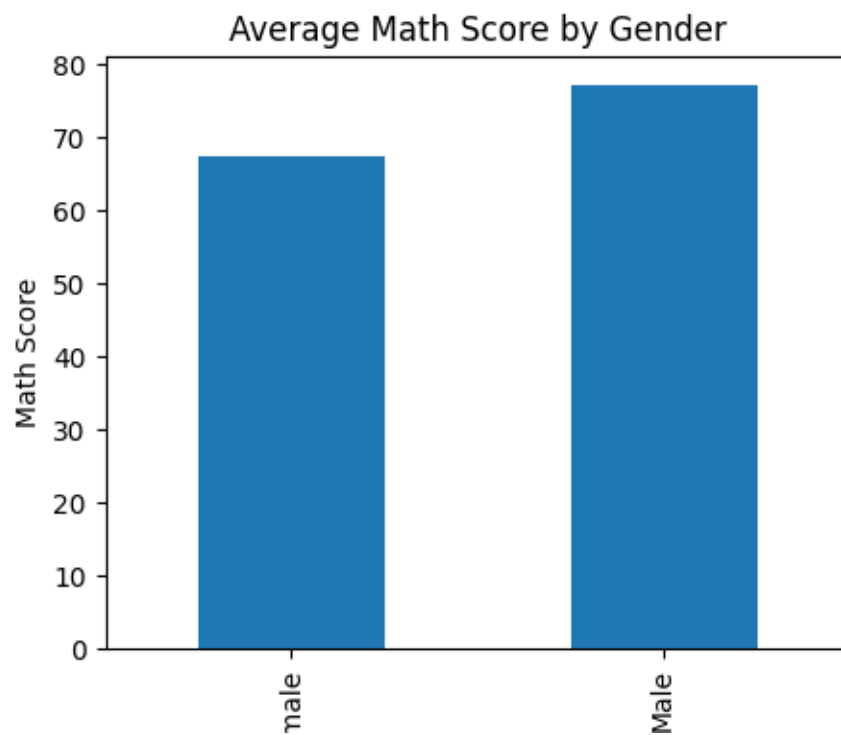

- Python
- Pandas
- Matplotlib

Methodology:

1. Loaded CSV dataset.
2. Calculated average math score.
3. Generated Bar Chart.
4. Generated Scatter Plot.
5. Generated Heatmap.

Results:

Observations:

- Average math score was calculated successfully.
- Reading and writing scores are positively correlated.
- Visualizations help understand data trends.

Conclusion:

The dataset was successfully analyzed using Pandas and Matplotlib.
